# White-Nose Syndrome & Cave Tours

White-Nose Syndrome (WNS) is a disease that is killing 70-100% of hibernating bats in infected caves. WNS does not have any effect on humans, livestock, or pets, only hibernating bats. WNS was first noted in some caves across the park in February 2013.

## HOW YOU CAN HELP

Do not wear the shoes, clothing, or carry objects that you had with you while on a cave tour at Carter Caves into another cave system outside of Carter Caves area. This may prevent spreading the disease to a new location.

## PROHIBITED ON CAVE TOURS

Because of the possibility of WNS contamination, the following are *prohibited on cave tours*:

- ⇒ **Pets** (service animals allowed)
- ⇒ **Bags** of ANY type - including purses, fanny packs, diaper bags, camera cases, backpacks etc.
- Bags containing necessary medical supplies ARE permitted.

## REQUIRED POST-TOUR DECONTAMINATION PROTOCOL

All CCSRP cave tour participants will be *required* to participate in a post-tour WNS decontamination procedure. This procedure will insure that the bottom of both shoes of each participant are treated with a mixture of Lysol and water. This process has been proven to help prevent the spread of the spores which cause WNS. **NOTE:** Please review these *required* post-tour procedures before the purchase of any cave tour tickets—refunds are NOT permitted.
